An interview was conducted between the undersigned and Examiner Anya on October 19, 2004.

Claims 1, 18, 54 and 55 were discussed, as were U.S. Patent Nos. 6,461,436 and 6,206,970. Agreement was reached with respect to added claims 54 and 55, and the amendments made to independent claims 1 and 18. With respect to the '436 patent, the undersigned asserted, and did so in his last-filed response, that such is not prior art to this application.

The Examiner indicated that the records available to him did not show that the instant application had been assigned to Micron Technology, and that he would further research the matter. Although the undersigned did not

have the entirety of the 10/741,300 file with him during the interview, the undersigned indicated that he believed such an assignment had indeed been filed.

Upon review of the entire file, it is proven that the above-referenced patent application, as a divisional of parent application 10/097,025, is assigned to Micron Technology, Inc. in an assignment recorded on March 11, 2002 in Reel 012709 at Frames 0181-0185.

Respectfully submitted,
